

KNITTED E-GLASS FIBRE PACKING - 550°C

Knitted packing is produced by knitting several types of yarn into a round, flexible rope.

Knitted E-Glass packing is a soft resilient, highly flexible packing mainly used by stove- and oven manufacturers as elastic doorseals.

Knitted E-Glass packing is made from texturized, continuous E-Glass fibre filaments up to a maximum of 9 microns. These fibres cause considerably less irritation of the skin than the coarser fibres.

Chemical Properties

Knitted E-Glass packing exhibits excellent chemical stability resisting attack from most corrosive agents. Exceptions are hydrofluoric acids and phosphoric acids and concentrated alkalis. No water of hydration is present. Excellent die-electrical strength.

Availability

Knitted E-Glass packing is available in the following diameter sizes: 6 - 12 mm. Other sizes are available on request. All E-Glass products are also available in a black version, which is made by a colourfast lubricant.

Applications

- Doorseals in boilers, ovens and stoves.
- Steam tracing lines
- Tadpole gaskets
- Furnace door gaskets
- Pipe and boiler lagging
- Personnel protection

Typical Physical Properties

| | |
|----------------------|-----------------------|
| Average density | 600 kg/m ³ |
| Colour | White |
| Basic Composition | Silica |
| Continuous Use Limit | 550°C |
| Melting Point | 840°C |
